How Do I Configure a Data Warehouse in Amazon Redshift?

How Do I Connect to the Amazon Redshift Serverless Warehouse with Query Editor

What does Amazon Redshift do?

Amazon Redshift is a fully managed, columnar cloud data warehouse. You can use it to run complex analytical queries on large datasets through massively parallel processing (MPP) technology. Datasets can range from gigabytes to petabytes.

Amazon Redshift supports virtually unlimited concurrent users for different workloads, such as dashboard reporting, data ingestion, and one-time analysis. It also monitors user workloads and uses machine learning (ML) to find ways to improve the physical layout of data to further optimize query speeds. Amazon Redshift is offered as a fully managed (provisioned) service and as a serverless service. In this course, you will learn about the serverless offering.
