Elliptic Functions Graduate Texts In Mathematics Vol 112:

Elliptic Functions Serge Lang, 2012-12-06 Elliptic functions parametrize elliptic curves and the intermingling of the analytic and algebraic arithmetic theory has been at the center of mathematics since the early part of the nineteenth century. The book is divided into four parts. In the first, Lang presents the general analytic theory starting from scratch. Most of this can be read by a student with a basic knowledge of complex analysis. The next part treats complex multiplication, including a discussion of Deuring's theory of l -adic and p -adic representations and elliptic curves with singular invariants. Part three covers curves with non-integral invariants and applies the Tate parametrization to give Serre's results on division points. The last part covers theta functions and the Kronecker Limit Formula. Also included is an appendix by Tate on algebraic formulas in arbitrary characteristic.

Arithmetic, Geometry, Cryptography, and Coding Theory 2021 Samuele Anni, Valentijn Karemaker, Elisa Lorenzo García, 2022-07-06 This volume contains the proceedings of the 18th International Conference on Arithmetic Geometry Cryptography and Coding Theory held online from May 31 to June 4, 2021. For over thirty years, the biennial international conference AGC 2 T Arithmetic Geometry Cryptography and Coding Theory has brought researchers together to forge connections between arithmetic geometry and its applications to coding theory and to cryptography. The papers illustrate the fruitful interaction between abstract theory and explicit computations covering a large range of topics including Belyi maps, Galois representations attached to elliptic curves, reconstruction of curves from their Jacobians, isogeny graphs of abelian varieties, hypergeometric equations, and Drinfeld modules.

LuCaNT: LMFDB, Computation, and Number Theory John Cremona, John Jones, Jennifer Paulhus, Andrew V. Sutherland, John Voight, 2024-03-22 This book will be published Open Access with a Creative Commons Attribution 4.0 International License (CC BY 4.0). The eBook can be downloaded electronically for free. This volume contains the proceedings of the LuCaNT LMFDB Computation and Number Theory conference held from July 10-14, 2023 at the Institute for Computational and Experimental Research in Mathematics (ICERM) Providence, Rhode Island, and affiliated with Brown University. This conference provided an opportunity for researchers, scholars, and practitioners to exchange ideas, share advances, and collaborate in the fields of computation, mathematical databases, number theory, and arithmetic geometry. The papers that appear in this volume record recent advances in these areas with special focus on the LMFDB, the L-Functions and Modular Forms Database, an online resource for mathematical objects arising in the Langlands program, and the connections between them.

Pairing-Based Cryptography - Pairing 2008 Steven Galbraith, Kenny Paterson, 2008-08-25 This book constitutes the thoroughly refereed proceedings of the Second International Conference on Pairing Based Cryptography Pairing 2008 held in London, UK, in September 2008. The 20 full papers presented together with the contributions resulting from 3 invited talks were carefully reviewed and selected from 50 submissions. The contents are organized in topical sections on cryptography, mathematics, constructing pairing-friendly curves, implementation of pairings, and hardware implementation.

An Introduction to

Number Theory G. Everest, Thomas Ward, 2007-05-21 Includes up to date material on recent developments and topics of significant interest such as elliptic functions and the new primality test Selects material from both the algebraic and analytic disciplines presenting several different proofs of a single result to illustrate the differing viewpoints and give good insight

Introduction to Mathematical Analysis Igor Kriz, Aleš Pultr, 2013-07-25 The book begins at the level of an undergraduate student assuming only basic knowledge of calculus in one variable It rigorously treats topics such as multivariable differential calculus Lebesgue integral vector calculus and differential equations After having built on a solid foundation of topology and linear algebra the text later expands into more advanced topics such as complex analysis differential forms calculus of variations differential geometry and even functional analysis Overall this text provides a unique and well rounded introduction to the highly developed and multi faceted subject of mathematical analysis as understood by a mathematician today

Transcendental Numbers M. Ram Murty, Purusottam Rath, 2014-06-24 This book provides an introduction to the topic of transcendental numbers for upper level undergraduate and graduate students The text is constructed to support a full course on the subject including descriptions of both relevant theorems and their applications While the first part of the book focuses on introducing key concepts the second part presents more complex material including applications of Baker's theorem Schanuel's conjecture and Schneider's theorem These later chapters may be of interest to researchers interested in examining the relationship between transcendence and L functions Readers of this text should possess basic knowledge of complex analysis and elementary algebraic number theory

Algebraic Geometric Codes: Basic Notions Michael Tsfasman, Serge Vlăduț, Dmitry Nogin, 2022-04-15 The book is devoted to the theory of algebraic geometric codes a subject formed on the border of several domains of mathematics On one side there are such classical areas as algebraic geometry and number theory on the other information transmission theory combinatorics finite geometries dense packings etc The authors give a unique perspective on the subject Whereas most books on coding theory build up coding theory from within starting from elementary concepts and almost always finishing without reaching a certain depth this book constantly looks for interpretations that connect coding theory to algebraic geometry and number theory There are no prerequisites other than a standard algebra graduate course The first two chapters of the book can serve as an introduction to coding theory and algebraic geometry respectively Special attention is given to the geometry of curves over finite fields in the third chapter Finally in the last chapter the authors explain relations between all of these the theory of algebraic geometric codes
