

The Cessna 182 Skylane History

As World War II was ending Dwane Wallace, President of the Cessna Aircraft Company, was looking towards the future and what Cessna's role would be in aviation. It was generally felt that with all the returning military pilots there would be a boom in general aviation because these pilots would want to stay involved in aviation, if not as a career at least as a hobby. In addition, there would be the G.I. Education Bill that would allow tens of thousands of veterans to undertake flight training paid for by their Veterans

Benefits. Cessna Aircraft Company saw a post-war need for two aircraft, one a simple trainer and another that would be the "Family Car of the Air". Both aircraft would have to be easy to fly and economical to operate. Prior to the war Cessna had been building the Cessna Airmaster, the Cessna 190/195 and the UC-78 Bobcat, a twin engine aircraft that later went on to fame as the first of Sky King's three "Songbird's". None of these aircraft fit the role of a simple, inexpensive-to-operate aircraft. Besides, Cessna had gained considerably in sheet metal fabrication capabilities during the war and it would be a

step backwards to continue to make wood and fabric aircraft. From this desire of Cessna Aircraft Company to have an aircraft available for the "everyman" pilot was born the Cessna 140. The Cessna 140 was a two place, 85 HP, strut braced, high

wing aircraft that was as simple an aircraft as could be conceived. The Cessna 140 first flew on June 28, 1945 and this aircraft would form the starting point for every single engine high wing Cessna design to be introduced for the next two decades. It was only with the introduction of the Cessna 177 Cardinal in 1968 that Cessna produced a single engine high wing aircraft that did not have its roots and lineage directly traceable back to the first Cessna 140. As a side note, after the Cessna 140 had been in production for awhile, Cessna introduced a stripped down, less expensive version of the aircraft, the Cessna 120. Brought to market primarily for the use of flight schools, the Cessna 120 didn't have flaps or side windows, and an electrical system, standard on the Cessna 140, was optional on the Cessna 120. In this case of which came first, the chicken or the egg, the Cessna 140 preceded the Cessna 120.

With the Cessna 140 coming off the production line Cessna had taken care of the trainer and basic personal aircraft end of the market but there was still the "Family Car of the Air" to be dealt with. Obviously it would have to carry more than two people and be a suitable cross country aircraft. The Cessna 140 design was used as the basis from which it was

stretched, tweaked, and given more guts and this became the Cessna 170, a four place, 145 horsepower aircraft that first flew on November 5, 1945.

As dealers, flight schools, commercial operators and individuals began to operate the Cessna 140 and Cessna 170, there appeared to be another market for Cessna to supply an aircraft for and that was the market of a swift, single engine load hauler. The Cessna engineers spread out the blueprints of the Cessna 170 on their drawing boards, beefed up the airframe, changed the fuel system, put on an adjustable stabilizer and added a whole bunch more ponies up front in the form of a 225 HP 470 cubic inch Continental six cylinder engine. With a fifty five percent increase in horsepower at less than a fifteen percent increase in empty weight over the model 170, performance increased dramatically. First flown on May 26, 1952, the Cessna 180 went on to become the workhorse aircraft of its day, loved by its operators for its ability to "carry anything, anywhere".
