Fluvial Hydrosystems Geoffrey Petts, C. Amoros, 1996-09-30 *Fluvial Hydrosystems* provides a unified approach to the study of running waters and aims to provide a scientific basis for sustainable management of rivers. It differs from traditional texts in viewing rivers as structured four-dimensional systems and integrating ecological and geomorphological approaches to provide a holistic perspective on river dynamics. Advanced students of geomorphology, ecology, environmental science, land use, and civil engineering will all benefit from this wide-ranging and stimulating textbook. *Fluvial Hydrosystems* G. E. Petts, C. Amoros, 1996

Fundamentals of Fluvial Geomorphology Ro Charlton, 2007-11-12 Rivers are significant geomorphological agents; they show an amazing diversity of form and behaviour and transfer water and sediment from the land surface to the oceans. This book examines how river systems respond to environmental change and why this understanding is needed for successful river management. Highly dynamic in nature, river channels adjust and evolve over timescales that range from hours to tens of thousands of years or more and are found in a wide range of environments. This book provides a comprehensive overview of recent developments in river channel management, clearly illustrating why an understanding of fluvial geomorphology is vital in channel preservation, environmentally sensitive design, and the restoration of degraded river channels. It covers flow and sediment regimes, flow generation, flow regimes, sediment sources, transfer, and yield, channel processes, flow characteristics, processes of erosion and sediment transport, interactions between flow and the channel boundary, deposition, channel form and behaviour, controls on channel form, channel adjustments, floodplain development, form and behaviour of alluvial and bedrock channels, response to change, how channels have responded to past environmental change, impacts of human activity, reconstructing past changes, river management, the fluvial hydrosystem, environmental degradation, environmentally sensitive engineering techniques, river restoration, the role of the fluvial geomorphologist. *Fundamentals of Fluvial Geomorphology* is an indispensable text for undergraduate students. It provides straightforward explanations for important concepts and mathematical formulae backed up with conceptual diagrams and appropriate examples from around the world to show what they actually mean and why they are important. A colour plate section also shows spectacular examples of fluvial diversity. *Tools in Fluvial Geomorphology* G. Mathias Kondolf, Hervé Piégay, 2016-04-28 *Fluvial Geomorphology* studies the biophysical processes acting in rivers and the sediment patterns and landforms resulting from them. It is a discipline of synthesis with roots in geology, geography, and river engineering and with strong interactions with allied fields such as ecology, engineering, and landscape architecture. This book comprehensively reviews tools used in fluvial geomorphology at a level suitable to guide the selection of research methods for a given question. Presenting an integrated approach to the interdisciplinary nature of the subject, it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management. Thoroughly updated since the first edition in 2003 by experts in their subfields, the book presents state-of-the-art tools that have revolutionized fluvial

geomorphology in recent decades such as physical and numerical modelling remote sensing and GIS new field techniques advances in dating tracking and sourcing statistical approaches as well as more traditional methods such as the systems framework stratigraphic analysis form and flow characterisation and historical analysis This book Covers five main types of geomorphological questions and their associated tools historical framework spatial framework chemical physical and biological methods analysis of processes and forms and future understanding framework Provides guidance on advantages and limitations of different tools for different applications data sources equipment and supplies needed and case studies illustrating their application in an integrated perspective It is an essential resource for researchers and professional geomorphologists hydrologists geologists engineers planners and ecologists concerned with river management conservation and restoration It is a useful supplementary textbook for upper level undergraduate and graduate courses in Geography Geology Environmental Science Civil and Environmental Engineering and interdisciplinary courses in river management and restoration

Handbook of Ecological Restoration Martin R. Perrow, Anthony J. Davy, 2002-09-05 The two volumes of this handbook provide a comprehensive account of the emerging and vibrant science of the ecological restoration of both habitats and species Ecological restoration aims to achieve complete structural and functional self maintaining biological integrity following disturbance In practice any theoretical model is modified by a number of economic social and ecological constraints Consequently material that might be considered as rehabilitation enhancement reconstruction or re creation is also included Restoration in Practice provides details of state of the art restoration practice in a range of biomes within terrestrial and aquatic marine coastal and freshwater ecosystems Policy and legislative issues on all continents are also outlined and discussed The accompanying volume Principles of Restoration defines the underlying principles of restoration ecology The Handbook of Ecological Restoration will be an invaluable resource to anyone concerned with the restoration rehabilitation enhancement or creation of habitats in aquatic or terrestrial systems throughout the world

Assessing the Ecological Integrity of Running Waters M. Jungwirth, S. Muhar, S. Schmutz, 2000-06-30 The assessment of the ecological integrity of running waters is a prerequisite to an understanding of the effects of human alterations The evaluation of degradation processes provides key information on how to avoid further negative impacts The success of future conservation mitigation and restoration activities will rely on sound assessment methodologies and their ecological relevance and applicability Assessment methodologies are therefore an integral part of sustainable river management This book synthesizes and discusses state of the art experiences in assessment methodologies Including the latest knowledge on structures processes and functions of running waters as a fundamental basis for developing adequate assessment methods the book focuses on method development application and in particular on integrated assessment methods This book is directed at scientists and managers with the aim of more effective preservation restoration and maintenance of the ecological integrity of running water ecosystems

G. Brown,Antony Brown,Timothy Quine,1999-05-04 This volume consists of twenty chapters addressing different aspects of the theme of fluvial processes and environmental change The overall coverage is broad scientifically from modelling to alluvial dating geographically from arid zone flash flooding to glacial meltwaters and in time from contemporary process studies to the Quaternary The introductory chapter sets the context which is an attempt to show how studies of fluvial processes can help us in understanding and therefore predicting the impact of environmental change on our rivers riverine resources and landscapes Environmental change includes both climatic factors however caused and human impacts on river basins The differentiation of these two factors is discussed in several chapters whilst others take a more holistic approach Both climatic and human factors have and will remain to act together and so their interactions need to be understood Fluvial Processes and Environmental Change is divided into five sections commencing with the slope catchment scale and proceeding to studies of channel response then floodplain processes and floodplain response and finally two studies from glacierised basins The

volume originated as a two day session of the British Geomorphological Research Group and contributors from Europe the USA and Australia were included in order to provide a wide perspective on the topic This book will be a valuable reference for postgraduates and researchers in fluvial geomorphology hydrology Quaternary science geology and environmental science
