**Brain Stem** The brainstem connects the cerebrum to the spinal cord. It is composed of three parts: the midbrain, pons, and medulla. The brainstem is responsible for many vital functions, including breathing, heart rate, and blood pressure. It also serves as a pathway for many important nerves.

**Cerebrum** The cerebrum is the largest part of the brain and is responsible for higher-level functions such as thought, memory, and language. It is divided into two hemispheres by the medial longitudinal fissure. The cerebral cortex is the outer layer of the cerebrum and is covered in a network of sulci and gyri.

**Cerebellum** The cerebellum is a smaller, more densely packed part of the brain located at the back and bottom. It is responsible for coordination, balance, and fine motor control. It has a highly convoluted surface with many small lobules.

**Spinal Cord** The spinal cord is a long, thin, tube-like structure that runs through the vertebral column. It is responsible for transmitting signals between the brain and the rest of the body. It is divided into cervical, thoracic, lumbar, and sacral regions.

**Frontal Lobe** The frontal lobe is the front part of the cerebrum. It is responsible for executive functions such as planning, decision-making, and problem-solving. It also contains the primary motor cortex, which controls voluntary movements.

**Parietal Lobe** The parietal lobe is the side part of the cerebrum. It is responsible for processing sensory information from the body, such as touch, temperature, and pain. It also contains the primary somatosensory cortex.

**Temporal Lobe** The temporal lobe is the side part of the cerebrum, located below the parietal lobe. It is responsible for processing auditory information and is also involved in memory and language. It contains the primary auditory cortex and the hippocampus.

**Occipital Lobe** The occipital lobe is the back part of the cerebrum. It is responsible for processing visual information. It contains the primary visual cortex.

**Left Hemisphere** The left hemisphere of the brain is responsible for language, logic, and analytical thinking. It contains the primary motor cortex, primary somatosensory cortex, and primary auditory cortex.

**Medial Longitudinal Fissure** The medial longitudinal fissure is a deep groove that runs down the center of the brain, separating the two hemispheres. It contains the optic chiasm and the infundibular stalk.

**Right Hemisphere** The right hemisphere of the brain is responsible for spatial awareness, intuition, and creative thinking. It contains the primary motor cortex, primary somatosensory cortex, and primary auditory cortex.

**Brain Stem** The brainstem is the part of the brain that connects the cerebrum to the spinal cord. It is composed of three parts: the midbrain, pons, and medulla. The brainstem is responsible for many vital functions, including breathing, heart rate, and blood pressure.

**Medulla** The medulla is the lower part of the brainstem. It is responsible for many vital functions, including breathing, heart rate, and blood pressure. It is also the point where the spinal cord begins.

**Pons** The pons is the middle part of the brainstem. It is responsible for many vital functions, including breathing, heart rate, and blood pressure. It is also the point where the facial nerves emerge from the brain.

**Optic Tract** The optic tract is a pair of nerves that carry visual information from the optic chiasm to the lateral geniculate nucleus of the thalamus.

**Optic Chiasm** The optic chiasm is the point where the optic nerves meet and cross. It is responsible for processing visual information from the two eyes.

**Optic Nerve** The optic nerve is a pair of nerves that carry visual information from the optic chiasm to the lateral geniculate nucleus of the thalamus.

**Olfactory Bulb** The olfactory bulb is a small, pea-shaped structure located at the base of the brain. It is responsible for processing olfactory information from the nose.

**Midbrain** The midbrain is the upper part of the brainstem. It is responsible for many vital functions, including breathing, heart rate, and blood pressure. It is also the point where the cerebral peduncles emerge from the brain.
