New Approaches To Fuzzy Modeling And Control: Design And Analysis Gideon Langholz, Michael Margaliot, 2000-07-04 Fuzzy logic has found applications in an incredibly wide range of areas in the relatively short time since its conception It was invented by Lotfi Zadeh a leading systems expert so it is perhaps not surprising that system theory is one of the areas in which fuzzy logic has made a profound impact Fuzzy logic combined with the paradigm of computing with words allows the use and manipulation of human knowledge and reasoning in the modeling and control of dynamical systems This monograph presents new approaches to the construction of fuzzy models and to the design of fuzzy controllers The emphasis is on developing methods that allow systematic design on the one hand and mathematical analysis of the resulting system on the other In particular the methods described allow rigorous analysis of the stability and robustness of the systems which are crucial issues in control theory The first theme of the book is a new approach to the systematic design and analysis of fuzzy controllers given

linguistic information concerning the plant and the control objective The new approach fuzzy Lyapunov synthesis is a computing with words version of the well known classical Lyapunov synthesis method The second theme of the book is to show that fuzzy controllers are in fact solutions of a nonlinear optimal control problem The authors formulate a novel nonlinear optimal control problem consisting of a new state space model referred to as the hyperbolic state space model and a new cost functional and show that its solution is a fuzzy controller This leads to a new framework for fuzzy modeling and control that combines the advantages of the fuzzy world such as linguistic interpretability and of classical optimal control theory such as guaranteed stability and robustness

Systems Structure and Control Petr Husek, 2008-08-01 The title of the book System Structure and Control encompasses broad field of theory and applications of many different control approaches applied on different classes of dynamic systems Output and state feedback control include among others robust control optimal control or intelligent control methods such as fuzzy or neural network approach dynamic systems are e g linear or nonlinear with or without time delay fixed or uncertain onedimensional or multidimensional The applications cover all branches of human activities including any kind of industry economics biology social sciences etc
