## **Cibse Guide B2 2011:**

**Building Services Design for Energy Efficient Buildings** Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12 The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings However textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating ventilation and air conditioning HVAC systems often with little wider context This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail These are HVAC and electrical systems In addition the following issues are addressed background issues on climate change whole life performance and design collaboration generic strategies for energy efficient low carbon design health and wellbeing and post occupancy evaluation building ventilation air conditioning and HVAC system selection thermal energy generation and distribution systems low energy approaches for thermal control electrical systems data collection controls and monitoring building thermal load assessment building electric power load assessment space planning and design integration with other disciplines In order to deliver buildings that help mitigate climate change impacts a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines This book provides a contemporary introduction and guide to this new approach for students and practitioners alike

**Air Conditioning and Ventilation: Fundamental to Practical** Nopparat Katkhaw, 2025-10-12 This book was written based on over 20 years of real world engineering and teaching experience It is carefully compiled from ASHRAE Handbooks SMACNA Standards and CARRIER reference documents along with other professional resources in the HVAC field The content is organized into two main units each supported with numerous comprehensive examples covering both SI and I P units to suit international practice Designed for students engineers and anyone interested in HVAC system design this book has been proven by more than 5 000 copies sold in print reflecting its practicality and reliability in both classroom and field applications CHAPTER 1 Psychrometrics and Thermal Comfort

**Faber & Kell's Heating and Air-Conditioning of Buildings** Doug Oughton, Steve Hodgkinson, Richard Brailsford, 2014-11-27 For over 70 years Faber Kell s has been the definitive reference text in its field It provides an understanding of the principles of heating and air conditioning of buildings in a concise manner illustrating practical information with simple easy to use diagrams now in full colour This new look 11th edition has been re organised for ease of use and includes fully updated chapters on sustainability and renewable energy sources as well as information on the new Building Regulations Parts F and L As well as extensive updates to regulations and codes it now includes an introduction that explains the role of the building services engineer in the construction process Its coverage of design calculations advice on

using the latest technologies building management systems operation and maintenance makes this an essential reference for all building services professionals

**Healthy and energy efficient buildings** Sunil K. Sansaniwal, Roberto Alonso González-Lezcano, 2023-12-21 This Research Topic on Healthy and Energy Efficient Buildings focuses on the emerging need for sustainable and healthy indoor environments The built environment contributes significantly to energy consumption and environmental degradation leading to adverse effects on human health and well being Therefore this Research Topic aims to bring together cutting edge research that addresses the complex interplay between building energy efficiency and occupant health The scope of the Research Topic covers topics such as energy efficiency indoor environmental quality sustainable energy health and well being building codes and standards energy management and green building practices The ultimate goal of the Research Topic is to promote sustainable building practices and enhance the well being of building occupants while reducing the environmental impact of buildings While energy efficiency has become a top priority in building design there has been less emphasis on creating indoor environments that are conducive to good health To achieve the goal of this Research Topic recent advances in building design construction and operation must be incorporated These include the use of advanced materials and technologies such as smart sensors and automation systems that can monitor and control indoor air quality temperature and lighting levels to create optimal indoor conditions for occupants Additionally the integration of renewable energy sources such as solar and wind power can help reduce the carbon footprint of buildings In order to promote healthy buildings there is a need for more research on the impact of building design and materials on indoor air quality and occupant health This includes exploring the use of natural ventilation and passive cooling strategies as well as the use of low emitting materials and finishes that do not off gas harmful chemicals This Research Topic seeks to address the need for sustainable buildings that prioritize both energy efficiency and occupant health
