FLUVIAL LANDFORMS

Source: Trista L. Thornberry-Eickholt, Colorado State University

Fluvial topography refers to the landforms created by flowing water. Fluvial landforms include, for instance, waterfalls, oxbow lakes, valleys, and deltas. These landforms are created through the processes of erosion, transportation, and deposition of sediment by flowing water. Fluvial landforms can vary in size and shape, from small ripples on a riverbed to large deltas where a river meets the sea.

The fluvial process results in the formation of two distinct landforms. They are-

1. Fluvial erosional landforms
2. Fluvial depositional landforms
