Chapra, 2023-10-19 Spreadsheet Problem Solving and Programming for Engineers and Scientists provides a comprehensive resource essential to a full understanding of modern spreadsheet skills needed for engineering and scientific computations Beginning with the basics of spreadsheets and programming this book builds on the authors decades of experience teaching spreadsheets and programming to both university students and professional engineers and scientists Following on from this it covers engineering economics key numerical methods and applied statistics Finally this book details the Visual Basic for Applications VBA programming system that accompanies Excel With each chapter including examples and a set of exercises this book is an ideal companion for all engineering courses and also for self study Based on the latest version of Excel Microsoft Excel for Microsoft 365 it is also compatible with earlier versions of Excel dating back to Version 2013 Including numerous case studies this book will be of interest to students and professionals working in all areas of engineering and science

**Model Predictive Vibration Control** Gergely Takács, Boris Rohal-Ilkiv, 2012-03-14 Real time model predictive controller MPC implementation in active vibration control AVC is often rendered difficult by fast sampling speeds and extensive actuator deformation asymmetry If the control of lightly damped mechanical structures is assumed the region of attraction containing the set of allowable initial conditions requires a large prediction horizon making the already computationally demanding on line process even more complex Model Predictive Vibration Control provides insight into the predictive control of lightly damped vibrating structures by exploring computationally efficient algorithms which are capable of low frequency vibration control with guaranteed stability and constraint feasibility In addition to a theoretical primer on active vibration damping and model predictive control Model Predictive Vibration Control provides a guide through the necessary steps in understanding the founding ideas of predictive control applied in AVC such as the implementation of computationally efficient algorithms control strategies in simulation and experiment and typical hardware requirements for piezoceramics actuated smart structures The use of a simple laboratory model and inclusion of over 170 illustrations provides readers with clear and methodical explanations making Model Predictive Vibration Control the ideal support material for graduates researchers and industrial practitioners

with an interest in efficient predictive control to be utilized in active vibration attenuation *Solutions Manual for Surface Water-quality Modeling* Steven C. Chapra,1997 Hydrology and Floodplain Analysis Philip B. Bedient,Wayne Charles Huber,2002 Now in its third edition Hydrology and Floodplain Analysis continues to offer a clear and up to date presentation of the fundamental concepts and design methods required to understand hydrology and floodplain analysis It addresses the computational emphasis of modern hydrology and provides a balanced approach to important applications in watershed analysis floodplain computation flood control urban hydrology stormwater design and computer modeling Includes HEC HMS HEC RAS and SWMM models plus GIS and radar rainfall The text is ideal for students taking an undergraduate or graduate course on hydrology while the practicing engineer should value the book as a modern reference for hydrologic principles flood frequency analysis floodplain analysis computer simulation and hydrologic storm water design Updated coverage in the third edition includes Three New Chapters Chapter 1 Geographic Information Systems GIS Chapter 2 Use of NEXRAD Radar Data Chapter 3 Floodplain Management Issues in Hydrology A new detailed case study of a complex watershed using GIS linked with radar technology New tools and technologies used for watershed analysis hydrologic modeling and modern floodplain delineation New examples and homework problems in each chapter **Numerical Methods for Engineers** Steven C. Chapra,Raymond P. Canale,1985 Shallow Water Hydraulics Oscar Castro-Orgaz,Willi H. Hager,2019-11-08 This book presents the theory and computation of open channel flows using detailed analytical numerical and experimental results The fundamental equations of open channel flows are derived by means of a rigorous vertical integration of the RANS equations for turbulent flow In turn the hydrostatic pressure hypothesis which forms the core of many shallow water hydraulic models is scrutinized by analyzing its underlying assumptions The book s main focus is on one dimensional models including detailed treatments of unsteady and steady flows The use of modern shock capturing finite difference and finite volume methods is described in detail and the quality of solutions is carefully assessed on the basis of analytical and experimental results The book s unique features include Rigorous derivation of the hydrostatic based shallow water hydraulic models Detailed treatment of steady open channel flows including the computation of transcritical flow profiles General analysis of gate maneuvers as the solution of a Riemann problem Presents modern shock capturing finite volume methods for the computation of unsteady free surface flows Introduces readers to movable bed and sediment transport in shallow water models Includes numerical solutions of shallow water hydraulic models for non hydrostatic steady and unsteady free surface flows This book is suitable for both undergraduate and graduate level students given that the theory and numerical methods are progressively introduced starting with the basics As supporting material a collection of source codes written in Visual Basic and inserted as macros in Microsoft Excel is available The theory is implemented step by step in the codes and the resulting programs are used throughout the book to produce the respective solutions Subject Guide to Books in Print ,1991 Indian National Bibliography Bellary Shamanna Kesavan,2015-04 **Modeling, Analysis and Optimization of**
